

No Network Drives listed in open menu

- 1 - run **regedit**
- 2 - locate

HKEY_LOCAL_MACHINE/SOFTWARE/Microsoft/Windows/CurrentVersion/Policies/System
3 - create a new **DWORD entry** with the name **EnableLinkedConnections** and **value 1**.

4 - restart your computer

5 - now you can see and use network drives with these installers or applications.

I found the solution here:
